

Lesson Plan 2

Descriptive data

Area of learning: Information Technologies – Formatting

Grade level: 6th Grade

Duration: 35 minutes

Topic outline:

General Topic: Spreadsheet and formatting skills through a scenario-based activity

Outline:

- Introduction to the “Trainee Detective” scenario
- Formatting the given Excel table
- Entering and formatting new evidence
- Group collaboration through task distribution
- Final self-checklist and submission
- Closure video and narrative conclusion

Instructional objectives:

By the end of this lesson, students will be able to:

- **Format** a given Excel table so that all text is fully visible and readable.
- **Adjust** column widths to fit content using manual resizing.
- **Apply** specific cell formatting (bold, italics, font size changes, strikethrough) to the cells indicated in the instructions with at least 90% accuracy.
- **Enter** all required data into the correct cells.
- **Demonstrate** effective collaboration by completing their assigned group role
- **Complete** all required formatting steps without omissions.
- **Use** the self-assessment checklist to verify and correct errors in both their own work and their partner’s.

MoNE (MEB) Standards: BT.6.4.1 – Spreadsheet Programs

- BT.6.4.1.2: Formats a table created for a specific purpose.

Supporting Frameworks: ISTE Standards (Knowledge Constructor, Empowered Learner, Computational Thinker), PRIMM Framework

Other materials

- [Appendix A](#): Scenario Introduction
- [Appendix B](#): Case File Excel
- [Appendix C](#): Newly Discovered Evidence
- [Appendix D](#): (All Formatting) Tasks and Help

- [Appendix E](#): Trainee Detective Checklist
- [Appendix F](#): Final Video
- [Appendix G](#): Drive Folder for Submission

Detailed explanations of the lesson:

Steps	Explain what the teacher does /says	Explain what the students are expected to do	Related Standards & Conceptual Connections (e.g. MEB, ISTE, PRIMM)
1 3mins	Introduction: Teacher, begins with the following explanation: “Hello everyone, today we are all going to become Detective Trainees. Our Chief Detective will soon explain what you need to do, but first I’d like to give you some information. In today’s scenario, you are still trainee detectives and the information we have may not be enough to solve the case. Therefore, you’re not solving the case. Your main task is to organize the entire suspect file into a clean, readable spreadsheet and deliver it to the professional detective.” Shows the video/ photo in Appendix A to present the context of the case. Says: “You may ask questions anytime something is unclear.” Clarifies that the task is strictly Excel formatting. Emphasizes again that students are only organizing the data, not solving the case.	Listen to the scenario and understand the context. Realize that the task is a technical Excel assignment. Express excitement about starting.	MoNE BT.6.4.1.2 ISTE: Knowledge Constructor, Empowered Learner PRIMM: Predict–Run preparation
2 25 mins	Main activity: In this activity, the teacher will track the time to fit all the work into one class. So time to time teacher may warn the class: “Detectives, we have 5 minutes left to complete this operation.” 1) Fixing the Table (Appendix B& partial D) • Provides the Excel file. • Projects only the second page of Appendix D on the board. • Guides students step-by-step in formatting the table. “Yes, now let’s begin organizing our table. Please follow the instructions you see on the screen and make the necessary adjustments in your own spreadsheet.”	1) Fixing the Table • Follow the instructions shown on the projected second page of Appendix D. • Organize their table by applying necessary formatting changes. • Ensure the table is clean, readable, and ready for new information. 2) Filling the Table	MEB: BT.6.4.1.1; BT.6.4.1.2 ISTE: Knowledge Constructor, Empowered Learner PRIMM: Run – Investigate – Modify

	- Explains that students must make the table readable by adjusting column widths, aligning text, and ensuring cell content is fully visible. - Circulates the classroom to guide and monitor students as they format their tables. - Waits until every group has completed the basic table organization before moving to the next step. 2) Filling the Table - When tables are ready, distributes the newly discovered evidence from Appendix C to each group. “Great work, Detectives. Now that your table is organized, it’s time to enter the newly discovered evidence. Please read your assigned items carefully and add them into the correct cells.” - Explains group task distribution: - Detective A: enters 2 pieces of evidence into the table. - Detective B: enters 2 pieces of evidence into the table. Provides technical guidance when needed. 3) Formatting the Table (Appendix D) - After all groups finish entering evidence, the teacher projects page 3 of Appendix D to motivate the students. “Excellent. Now that your table includes all the new evidence, let’s improve the appearance as the detective wants.” - Then projects the final page of Appendix D. “This is how you’re supposed to format the table. Please apply the instructions carefully and match the required style.” - Clarifies that this stage is purely technical formatting and ensures students understand they are only following formatting rules.	- Share tasks within the group (Detective A / B). - Enter their assigned suspect information into the correct cells. - Prepare the table for formatting. 3) Formatting the Table - Apply formatting instructions from Appendix D p.4. - Finalize readability, structure, and appearance of the table.	
3	Extension activity: (For Early Finishers – Used Between Steps as Needed) If students finish a step early, they may use the two additional columns titled	Early finishers stay meaningfully engaged. The entire class progresses at a controlled pace.	

	“Notes/Status” to quietly reflect. Completing these columns is <i>optional</i> during the main activity. They are used to manage pacing differences across the class. The teacher may say: “Since you finished earlier, you may think about who the suspect might be, but do this very silently. You may write a short note to the detective, a personal theory, or ‘Which evidence seems most suspicious’. Remember, this part is completely optional. Your main mission is to complete all formatting steps accurately. If you prefer, go back and double-check your formatting for any mistakes.”	The teacher ensures mastery of core skills while differentiating instruction.	
4 7 mins (5 +2)	Closure activity: • Shares the self-assessment checklist (Appendix E). • Asks students to review each item and correct any mistakes before sending it to the detective. • Explains file submission format and process. • After all submissions, plays the final message from the professional detective. Closes with the narrative: “Today, we created a clean and organized suspect file. We tabulated statements and evidence carefully and formatted everything exactly as requested. Thanks to our work, the case has now been solved.” Briefly evaluates groups based on formatting accuracy.	• Use Appendix D to self-evaluate. • Correct any missing or incorrectly formatted elements. • Prepare and submit their file to the teacher. • Enjoy the final “case solved” moment in the story.	MEB: BT.6.4.1.2 ISTE: • Empowered Learner • Computational Thinker PRIMM: Evaluate
5 2 mins	Assessment: Type: Formative: The teacher conducts ongoing formative assessment throughout the lesson to monitor student progress and provide immediate feedback. (focuses on students’ performance) Teacher will assess: • Correct formatting of the table • Completion of all required formatting tasks • Accuracy of cell content placement • Effective use of self-checklist Assessment method: Multiple evidence sources used to evaluate learning	Students should use the task list sent to them as a to-do list to evaluate themselves and indicate how much of what is requested is completed.	MEB: • BT.6.4.1.1 • BT.6.4.1.2 ISTE: • Empowered Learner (self-assessment) • Knowledge Constructor PRIMM: Evaluate

	• Real-time observation (Teacher walkthrough and screen checks) • Review of students' submitted files to verify formatting accuracy and correctness. • Student self-checklist to reflect on their work and make revisions. • Task completion checks, where students mark off completed formatting tasks to show their progress		
--	---	--	--

Suggestions for teachers who may implement this lesson plan in the future:

1. Detailed explanation of how technological tools will be used:

Digital Material Distribution Strategy:

- To maintain student focus and support classroom management, not all materials will be shared at once. Students receive access to an empty Google Drive folder at the beginning of the lesson. (Appendix G (Submission Folder))
- As the lesson progresses, the teacher updates the folder and adds the necessary documents (Appendix B (Case File Excel), Appendix C (Newly Discovered Evidence), Appendix E (Checklist)) at the appropriate time. Students refresh the page and access only the materials needed for the current step. This approach reduces distractions and ensures tasks proceed in order.
- The teacher shows only the necessary pages of Appendix D on the board. This keeps all students working at the same pace. It prevents students from jumping ahead. It supports smooth classroom management. It gives the teacher full control over timing and transitions.
- A "Submission" folder in the same Drive directory is used for students to upload their final tables, ensuring the whole process stays within one digital environment.
- The formatting toolbar may be projected to the whole class.
- A single consistent sharing method should be used.

2. Are there any cautions or points to consider about the technological tools that are integrated into the lessons?

- Since two students will share one computer, task distribution must be clear and balanced.

- Teachers should anticipate that some pairs will work faster; however, because materials are released in stages, classroom pacing remains synchronized and manageable.
- Projecting the formatting toolbar or section examples on the board provides consistent visual guidance without giving students too much autonomy prematurely.

3. Other suggestions:

- The detective narrative can be enriched using short videos, audio notes, or sound effects.
- If a sound system is not available, the same messages can be shown as static images or a simple slideshow so the storyline remains engaging.
- In the following lesson, advanced students may work on filtering / conditional formatting as an extension.
- A mini-competition for “Most Organized Table” can increase motivation.
- Required documents may also be provided as printed handouts if preferred.

Optional Classroom Management Strategy (Silence Through Storytelling)

To reduce noise and maintain focus, teachers may use a narrative-based silence strategy that fits the detective theme. At the beginning of the lesson, the teacher can say: “Detectives, our system has a noise sensitivity meter. If the room becomes too loud, the suspect may realize we’re tracking them and escape. We must keep our operations quiet.”

This playful approach often helps students self-regulate and stay quieter, as it turns silence into part of the mission. However, teachers should use this strategy according to their comfort level and classroom dynamics.
