FINAL ESSAY

Attention: This is ALL individual work, and has to be your own original text. Don't do garbage writing. Don't get LLM AI write it for you!

Please evaluate your own production experience, from treatment to final video, and answer the following questions:

1. What is the topic and **purpose** of your video project? How can it be used?
2. **Why** did you choose this topic?
3. What kind of technical and logistical **difficulties** did you run into? How did you revolve these?
4. What aspects and/or components of your work do you think are **good**?
5. What aspects and/or components of your work need **improvement**? (yes, given the time limit☺ —i.e. max. 2 min.)
6. How did you contribute to the **content** of your video? Which **resources** did you find? How did you use these in your video?
7. In what ways did you make use of **generative AI** in your work (such as ChatGPT or Sora)? What kind of **prompts** did you use? Provide at least 2 of your prompts. Also, indicate the names of the **tools** you have used (including grammar and usage checkers).
8. How did you contribute to the **collective work as a whole**? What did you do? What did your partner do? (If you worked solo, you can skip this question)
9. **References:** Please provide your references (the sources you refer to in question 6) in a separate section. Use the APA 7 format when you list your sources.

Final Essay: My Video Production Experience

The topic of my video project is "How to Brew Espresso." The purpose of this video is to produce a detailed tutorial for coffee lovers and help beginner baristas on making the perfect espresso. This video can be a helpful resource for anyone looking to improve their coffee-making skills, learn more about the espresso brewing process or have an overview about cultural and historical aspects of espresso. I chose this topic because I was a barista for a short time, but I couldn't find a tutorial video which shows all the process clearly. I'm also passionate about coffee. The process of making coffee from the scratch and science behind brewing espresso is so interesting. I wanted to share this with others who might share my interest. With the growing trend of home baristas, I thought this topic would be both relevant and useful. And my company Yusuf also shares the same interest with me, so we started to work together.

We ran into several technical and logistical challenges during production. In filming the process capturing the detailed steps required precise camera angles and good lighting, which was tricky in a narrow space. The café I used to work at -where we shot the video- has a dark interior with a small bar. Getting good lighting was challenging. To overcome these issues, we used multiple camera angles and took extra time to set up the lighting correctly. Ensuring clear audio was difficult with background noise from the coffee machine. During editing, we used noise-canceling techniques, and we voiced over to improve audio clarity. Editing the clips to create a smooth, coherent narrative took a lot of time and effort. To not make it like the video was in a hurry, we spent lots of effort. Fitting all this information into a 2-minute video was challenging. We had to eliminate some shots and narratives which are not vital for the video to fit in 2 minutes.

Several aspects of our work turned out well. We wanted to include every tip to make the perfect espresso. To be able to achieve it we do research from several resources. We are also confirmed to the barista in the video, what we learned and if it is true. With the notes of experienced baristas, we prepared an informative storyboard. However, we couldn't use all the small tips. After including the essential parts in the video, we had to shorten the details a little bit. However, we tried to include them in small animations as much as we can. The video provides clear, step-by-step instructions that are easy to follow. The video quality is high, with focused shots that make the viewing experience better. The editing is smooth, with transitions and overlays that keep the video visually appealing.

Given the time constraints, there are a few areas that could be improved. The 2-minute limit made it challenging to cover all aspects of espresso making in detail. More time would allow for a deeper exploration of the process. I wanted to include more advanced tips and tricks for experienced baristas. It could add value to the video, but it would take more time than 2 minutes. Also, if we could arrange a café with a bigger bar section, our filming process would be easier and more professional. However, most cafes don't allow people into the bar section. Even the cafe where we shot was not allowed at first because I'm not a current worker.

I contributed to the content by researching the espresso brewing process thoroughly. I gathered information from reputable websites and coffee experts. I checked their similarities and differences. After gathering information, I prepared a script for our storyboard. I show my coffee process script to an experienced barista for if there is anything wrong, not used currently or they have any other hints. Additionally, I used Grammarly to correct grammar mistakes without changing my writing style. After that, we shared our recommendations for the video title and wrote them to ChatGPT for it to create a more engaging title. After that, I started to write the script on the storyboard, find and take pictures for it. Also, I shoot the coffee brewing process. Then help my partner by giving ideas about his part.

My partner played a crucial role in the project as well. He gathered information about coffee's cultural and historical aspects. After gathering this information, he edited them to shorten it. After his information, we finished the first storyboard. Before getting to the editing phase, he edited our storyboard with my advice to fit all information in 2-minutes. He filmed the other clips, and he helped us to ensure we captured all the necessary shots with the right angles and lighting. He also found us an entry video since we wanted to change our entry video. He also contributed significantly during the editing phase, helping to piece together the clips into an engaging final product.

We used ChatGPT to enhance the quality of our work. We corrected our grammar mistakes to ensure the text was error-free with ChatGPT and Grammarly. We also gave it our ideas about the title and wanted a title which covers our ideas. I wasn't entirely sure about how to use website links with APA reference style properly. After research, I tried to write myself, then I checked if it was correct with ChatGPT.

Here are three of the prompts I used:

1. "Can you help us create a title according to the examples I gave you?"
2. "Can you fix my grammar mistakes?"
3. "Can you check if I write these links correctly in APA reference style?"

Working as a team, we divided the tasks to leverage our strengths. Both of us took part in the whole process. We both did research to gather reliable information and create storyboards. I focused more on editing the text and filming the coffee making process. My partner was working on the filming of other clips and editing processes. His technical skills combined with my content creation, resulting in a well-rounded final product. In conclusion, this project was a valuable learning experience that allowed us to explore the technical and creative aspects of video production. Despite some challenges, we are pleased with the final product and look forward to applying these skills to future projects.
